

## miha bodytec - Impulses for a healthy future!

### The world's leading premium manufacturer for whole-body EMS equipment (WB-EMS)

miha bodytec GmbH is a manufacturer of medical products for use in prevention and therapy. The German company has specialised in the further development of whole-body electromyostimulation (EMS) for use in the health sector and the treatment of various therapeutic areas. To this end, miha bodytec has been working closely with researchers from health and sports sciences as well as physiotherapists for over 15 years. The resulting unique concept of WB-EMS combines the passive component of established electrotherapy with an active treatment regimen. The use of WB-EMS has been successfully established in Europe and is being used in a growing number of practices.

The WB-EMS devices from miha bodytec are developed in Germany and are subject to strict specifications and controls during production to ensure a permanently high and sustainable quality. From Germany, miha bodytec now supplies a large number of countries in Europe and the rest of the world. The miha bodytec maintains close contact with its customers through its company locations in UK and the USA as well as distribution partnerships in over 40 countries.

### Powerful and mobile into old age

With the products of miha bodytec, the health sector has a treatment option at its disposal that meets the health challenges of an increasingly aging society and an increasingly sedentary lifestyle. In close exchange with science and research as well as with users, the company works daily on the further development of solutions for the therapeutic and preventive use of whole-body EMS technology.

### Active in research

miha bodytec has been committed to researching the efficacy and safety of WB-EMS application from the very beginning, working together with leading experts in numerous renowned sports, physics and medical institutes at various universities. The company has contributed its experience to the development of the "Safety-First" guideline for EMS-training and is part of the DIN Standards Committee.

### The product range - certified as medical devices for assured quality

For the reliable use of the miha bodytec product range in practices and healthcare facilities around the world, the quality assurance system for the development and production of the devices is certified by Berlin Cert. This means that the products of miha bodytec GmbH meet the high standards for the use of whole-body electromyostimulation devices in the medical field. With the voluntary certification according to the Medical Device Single Audit Program (MDSAP), miha bodytec GmbH additionally documents that it complies with the currently highest, globally valid quality standards of the medical technology industry.
